Index		15

Chapter 1

Hierarchical Index

1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

CommonInterface	6
Common	5
DBInterface	11
DBAPI	7

Chapter 2

Data Structure Index

2.1 Data Structures

Here are the data structures with brief descriptions:

Common	5
CommonInterface	6
DBAPI	7
DBInterface	11

Chapter 3

Data Structure Documentation

3.1 Common Class Reference

Inheritance diagram for Common:

Public Member Functions

- **Common** (\$debug)
- **connect** (\$db)
- **executeQuery** (\$sql, \$filename)

Data Fields

- **\$conn**
- **\$debug**
- **\$db** ="database.cse.tamu.edu"
- **\$dbname** ="jgwesterfield-WalkerData"
- **\$user** ="jgwesterfield"
- **\$pass** ="Whoop19!"

3.1.1 Detailed Description

Created by PhpStorm. User: JonathanWesterfield Date: 2/8/18 Time: 4:20 PM

Common (p. 5) is responsible for actually connecting to the MySQL database. The **Common** (p. 5) class object must be created and the **connect()** (p. 6) function run before any functions on the database can be performed.

3.1.2 Member Function Documentation

3.1.2.1 Common (\$debug)

Common (p. 5) constructor.

Parameters

<i>\$debug</i>	The constructor for the Common (p. 5) class
----------------	--

Implements **CommonInterface** (p. 6).

3.1.2.2 connect (*\$db*)

Parameters

<i>\$db</i>	Uses the class member functions to actually make the connection to the database
-------------	---

Implements **CommonInterface** (p. 6).

3.1.2.3 executeQuery (*\$sql*, *\$filename*)

Parameters

<i>\$sql</i>	
<i>\$filename</i>	

Returns

mixed

Uses the sql statement that is passed in and executes the query

Example Code: `$sql = "SELECT COUNT(WalkerNumber) FROM WalkerData"; $rs = $this->COMMON->executeQuery($sql, $_SERVER["SCRIPT_NAME"]); $row = $rs->fetch(PDO::FETCH_ASSOC); return (int)$row['COUNT(WalkerNumber)'];`

Implements **CommonInterface** (p. 6).

The documentation for this class was generated from the following file:

- PHP:Mysql API/CommonMethods.php

3.2 CommonInterface Interface Reference

Inheritance diagram for CommonInterface:

Public Member Functions

- **Common** (\$debug)
- **connect** (\$db)
- **executeQuery** (\$sql, \$filename)

3.2.1 Detailed Description

Created by PhpStorm. User: JonathanWesterfield Date: 2/8/18 Time: 4:31 PM

This is an interface for **Common** (p. 5).

The documentation for this interface was generated from the following file:

- PHP:Mysql API/CommonInterface.php

3.3 DBAPI Class Reference

Inheritance diagram for DBAPI:

Public Member Functions

- **__construct** (\$db)
- **__destruct** ()
- **printEntireDB** ()
- **getTotalNumWalkers** ()
- **getNumWalkersToday** ()
- **getNumWalkersThisWeek** ()
- **getCurrentYearTraffic** ()
- **getTrafficByYear** (\$year)
- **getCurrentMonthTraffic** ()
- **getTrafficByMonth** (\$year, \$month)
- **getCurrentDayTraffic** ()
- **getTrafficByDay** (\$year, \$month, \$day)
- **getTrafficTimeRange** (\$year1, \$month1, \$day1, \$year2, \$month2, \$day2)

3.3.1 Detailed Description

Created by PhpStorm. User: JonathanWesterfield Date: 2/8/18 Time: 4:35 PM

Includes the various functions that can be used in order to extract useful information from the database. Implements DBInterface.php

3.3.2 Constructor & Destructor Documentation

3.3.2.1 __construct (\$db)

DBAPI (p. 7) constructor.

Parameters

<i>\$db</i>	Mostly sets up the dates in this object. Also sets the timezone to our timezone.
-------------	--

Implements **DBInterface** (p. 11).

3.3.2.2 __destruct ()

Class destructor

Implements **DBInterface** (p. 11).

3.3.3 Member Function Documentation**3.3.3.1 getCurrentDayTraffic ()****Returns**

array

Gets the number of people for every hour and returns a length 24 array output the times to see if I overshot how many times to iterate

Implements **DBInterface** (p. 12).

3.3.3.2 getCurrentMonthTraffic ()**Returns**

array

Gets the traffic numbers for each day during the current month.

Implements **DBInterface** (p. 12).

3.3.3.3 getCurrentYearTraffic ()**Returns**

array

Returns an array of the traffic numbers for each month in a 12 element array

Implements **DBInterface** (p. 12).

3.3.3.4 `getNumWalkersThisWeek ()`

Returns

int

Gets the number of walkers in the last week starting from today

Implements **DBInterface** (p. 12).

3.3.3.5 `getNumWalkersToday ()`

Returns

int

Gets the number of walkers from Today

Implements **DBInterface** (p. 13).

3.3.3.6 `getTotalNumWalkers ()`

Returns

int

Gets the total number of walkers in the table

Implements **DBInterface** (p. 13).

3.3.3.7 `getTrafficByDay ($year, $month, $day)`

Parameters

<i>\$year</i>	
<i>\$month</i>	
<i>\$day</i>	

Returns

array

Gets the traffic for each hour and returns it in a 24 element array.

Usage: `<var = getTrafficByDay(2018, 2, 15);>` for Febraury 15, 2018 output the times to see if I overshot how many times to iterate

Implements **DBInterface** (p. 13).

3.3.3.8 `getTrafficByMonth ($year, $month)`

Parameters

<i>\$year</i>	
<i>\$month</i>	

Returns

array

Gets the traffic for each day during the specified month of the specified year

Usage: `getTrafficByMonth(2018, 2);` // for February 2018

Implements **DBInterface** (p. 13).

3.3.3.9 getTrafficByYear (*\$year*)**Parameters**

<i>\$year</i>	
---------------	--

Returns

array

Gives the traffic for each month in an array for the specified year passed in

Implements **DBInterface** (p. 14).

3.3.3.10 getTrafficTimeRange (*\$year1*, *\$month1*, *\$day1*, *\$year2*, *\$month2*, *\$day2*)**Parameters**

<i>\$year1</i>	
<i>\$month1</i>	
<i>\$day1</i>	
<i>\$year2</i>	
<i>\$month2</i>	
<i>\$day2</i>	

Returns

int

Takes in a date range (start and end date) and counts the number of walkers in the given range

Implements **DBInterface** (p. 14).

3.3.3.11 printEntireDB ()

Prints out a table of the entire database

Implements **DBInterface** (p. 11).

The documentation for this class was generated from the following file:

- PHP:Mysql API/DBAPI.php

3.4 DBInterface Interface Reference

Inheritance diagram for DBInterface:

Public Member Functions

- **__construct** (\$db)
- **printEntireDB** ()
- **getTotalNumWalkers** ()
- **getNumWalkersToday** ()
- **getNumWalkersThisWeek** ()
- **getCurrentYearTraffic** ()
- **getTrafficByYear** (\$year)
- **getCurrentMonthTraffic** ()
- **getTrafficByMonth** (\$year, \$month)
- **getCurrentDayTraffic** ()
- **getTrafficByDay** (\$year, \$month, \$day)
- **getTrafficTimeRange** (\$year1, \$month1, \$day1, \$year2, \$month2, \$day2)

3.4.1 Detailed Description

Created by PhpStorm. User: JonathanWesterfield Date: 2/8/18 Time: 4:36 PM

3.4.2 Constructor & Destructor Documentation

3.4.2.1 __construct (\$db)

DBAPI (p. 7) constructor.

Parameters

<code>\$db</code>	Mostly sets up the dates in this object. Also sets the timezone to our timezone.
-------------------	--

Implemented in **DBAPI** (p. 7).

3.4.3 Member Function Documentation

3.4.3.1 `getCurrentDayTraffic ()`

Returns

array

Returns a length 24 array containing total number of walkers for each hour for the current day

Implemented in **DBAPI** (p. 8).

3.4.3.2 `getCurrentMonthTraffic ()`

Returns

array

Returns an array containing total number of walkers for each day for the current month

Implemented in **DBAPI** (p. 8).

3.4.3.3 `getCurrentYearTraffic ()`

Returns

array

Returns an array containing total number of walkers for each month for the current year 12 Element Array

Implemented in **DBAPI** (p. 8).

3.4.3.4 `getNumWalkersThisWeek ()`

Returns

int

Returns the number of walkers from the start to the end of the week

Implemented in **DBAPI** (p. 9).

3.4.3.5 getNumWalkersToday ()

Returns

int

Returns the number of walkers that walked through from the start to the end of the day

Implemented in **DBAPI** (p. 9).

3.4.3.6 getTotalNumWalkers ()

Returns

int

Returns the total number of walkers in the table

Implemented in **DBAPI** (p. 9).

3.4.3.7 getTrafficByDay (\$year, \$month, \$day)

Parameters

<i>\$year</i>	
<i>\$month</i>	
<i>\$day</i>	

Returns

array

Returns an array (24) containing total number of walkers for each hour

Usage: <var = getTrafficByDay(2018, 2, 15);> for Febraury 15, 2018

Implemented in **DBAPI** (p. 9).

3.4.3.8 getTrafficByMonth (\$year, \$month)

Parameters

<i>\$year</i>	
<i>\$month</i>	

Returns

array

Gets the traffic for each day during the specified month of the specified year

Usage: `getTrafficByMonth(2018, 2);` // for February 2018

Implemented in **DBAPI** (p. 9).

3.4.3.9 getTrafficByYear (\$year)**Parameters**

<i>\$year</i>	
---------------	--

Returns

array

Gives the traffic for each month in an array for the specified year passed in

Implemented in **DBAPI** (p. 10).

3.4.3.10 getTrafficTimeRange (\$year1, \$month1, \$day1, \$year2, \$month2, \$day2)**Parameters**

<i>\$year1</i>	
<i>\$month1</i>	
<i>\$day1</i>	
<i>\$year2</i>	
<i>\$month2</i>	
<i>\$day2</i>	

Returns

int

Takes in a date range (start and end date) and counts the number of walkers in the given range

Implemented in **DBAPI** (p. 10).

The documentation for this interface was generated from the following file:

- PHP:Mysql API/DBInterface.php
